PROFESSIONAL SUMMARY

IT and network support professional with over two years of hands-on experience maintaining communication and network hardware across a multi-building campus environment. Comfortable troubleshooting connectivity issues, installing switches, wireless access points, and A/V and intercom equipment, and keeping accurate, audit-ready documentation of configurations and repairs. Completing a B.S. in Computer Science/Cybersecurity (GPA 3.77) at Colorado State University, Pueblo, with an NSA-Designated Institution Certificate in Cyber Security Defense and a Cisco Computer Networking Technician certification, which give a solid grounding in the cyber security side of physical security and unified communications systems. Works well with colleagues across departments and trains non-technical staff on new systems without talking over their heads, and brings a curious, growth-minded approach to picking up new security and communications technology. Holds a valid Colorado driver's license and is authorized to work in the U.S. without sponsorship.

EDUCATION

Colorado State University, Pueblo	December 2026
Bachelor of Science, Computer Science / Cybersecurity GPA: 3.77	
NSA-Designated Institution Certificate in Cyber Security Defense	
Relevant coursework: Cybersecurity Principles, Network Architecture, Data Communications, Systems Administration, Scripting & Automation	
Arapahoe Community College	May 2025
Associate of Science, Cybersecurity Associate of Science, General Networking GPA: 3.26	
Cisco - Computer Networking Technician Certification	May 2022

RELEVANT EXPERIENCE

IT Work Study Technician, Arapahoe Community College	Aug 2021 - Jan 2024
- Diagnosed connectivity and security-relevant issues across LAN infrastructure, documented root cause findings, and escalated complex cases with full diagnostic detail to senior staff. - Reviewed move, add, and change requests from staff, worked out what software or hardware adjustments were needed, and coordinated more complex changes with Level III staff. - Installed and maintained network-connected hardware across a multi-building campus, including switches, wireless access points, printers, and A/V and intercom equipment. - Documented and helped implement voice and data network changes, including patch panel and cabling work, and kept accurate, audit-ready records of hardware and configurations. - Managed user accounts and access provisioning in Active Directory in line with institutional policy, building hands-on experience with identity management and accountability controls. - Took part in campus-wide infrastructure rollouts and technology upgrades, coordinating with cross-functional IT teams from planning through post-deployment checks. - Tracked tickets in JIRA and HappyFox and trained non-technical staff on the safe use of network-connected systems, explaining technical issues in plain language.
